Love It!

In this truly one-of-a-kind book, Ascher introduces the mathematical ideas of people in traditional, or small-scale, cultures often omitted from discussion of mathematics. Topics such as Numbers: Words and Symbols, Tracing Graphs in the Sand, The Logic of Kin Relations, Chance and Strategy in Games and Puzzles, and The Organization and Modeling of Space are traced in various cultures including the Inuit, Navajo, and Iroquois of North America; the Inca of South America; the Malekula, Warlpiri, Maori, and Caroline Islanders of Oceania, and the Tshokwe, Bushoong, and Kpelle of Africa. As Ascher explores mathematical ideas involving numbers, logic, spatial configuration, and the organization of these into systems and structures, readers gain both a broader understanding and an appreciation for the ideas of other peoples.

My Personal Review:
Very interesting book. Draws the reader in and keeps it interesting. It worked well for my research paper, but would also be good for light reading.
